

Web Tools | Plato

Plato is a server that is hosted at Acadia University that enables you to store class information, host a class website, and even have students upload assignments that are too big to be uploaded to ACME.

How are Acadia Professors using it?

Through Plato, faculty can access three areas: a course folder, a www folder and an assignment folder.

The "Course" folder is where professors place any course related material. If this file is not set up, please contact Terry at the AITT (ext. 1747 or terry.aulenbach@acadiau.ca). This is an especially useful place to put large files that do not fit on ACME. Students in your class can access the information placed here. Sensitive material should not be placed here, as it is accessible to all ACE and AXE account users.

Also on Plato is a "WWW" folder. This is where faculty can place web sites for their course (you may want to put in a link from ACME to this web site). This folder should not be used for large files. To set up a www folder please contact Terry at the AITT.

Finally, Plato contains an "Assignment" folder. This folder is set up customized to faculty needs in terms of who has access and who can add/delete files. To set up and add features to this folder, contact Terry at the AITT.
